HWK301: TIBCO Hawk® 6.x Administration

COURSE OVERVIEW
This course provides an overview of monitoring and managing applications using TIBCO Hawk®. Class participants examine the architecture and components of a Hawk monitoring infrastructure. They monitor and manage TIBCO and third party applications using the Hawk WebConsole. Hands-on exercises teach participants how to configure rules to enable monitoring, alerting and management in a TIBCO distributed enterprise. Hawk security, managing schedules, and working with repositories are also covered as part of this course.

LEARNING OBJECTIVES
- Discuss the features and functions of TIBCO Hawk®
- Describe Hawk components and architecture
- Build monitoring and management rules
- Monitor and manage applications with Hawk WebConsole
- Examine usage of schedules and repositories
- Explore advanced rulebase design techniques
- Explain security and scalability considerations

COURSE TOPICS
- The Event Enabled Enterprise and TIBCO Hawk
- Installation and configuration
- Hawk microagents, methods and alerts
- Rules and rulebases
- Rule schedules and storage options
- Monitoring TIBCO Applications
- Hawk Event Service features
- Configuring security

COURSE PREREQUISITES
- Recommended: EMS301: TIBCO Enterprise Message Service™ Administration
