This course covers the introduction to TIBCO BusinessWorks design time and runtime architectures along with hands-on labs. It also covers application deployment, debugging, runtime security, load-balancing, fault-tolerance, enterprise deployment with TIBCO Enterprise Administrator software and monitoring with TIBCO Hawk software.

Learning Objectives

- Explain BusinessWorks 6.x capabilities
- Examine modular design for applications
- Differentiate between local & enterprise runtime environments
- Deploy BusinessWorks applications
- Identify debugging options for applications
- Perform application load balancing and fault tolerance
- Implement security at multiple levels
- Use other TIBCO Enterprise Administrator agents to enhance monitoring with Hawk software

Course Prerequisites

- Familiarity with XPath, XSD, WSDL, REST and SOAP would be useful
