COURSE RATING

Courses are rated from one to five, with five checks indicating most technically challenging.

TIBCO Software Inc. TIBCO Software empowers executives, developers, and business users with Fast Data solutions that make the right data available in real time for faster answers, better decisions, and smarter action. Over the past 15 years, thousands of businesses across the globe have relied on TIBCO technology to integrate their applications and ecosystems, analyze their data, and create real-time solutions. COURSE OVERVIEW
The TIBCO StreamBase® event processing platform is a high-performance system for rapidly building applications that analyze and act on real-time streaming data.

This course provides an introduction to the TIBCO StreamBase Event Processing platform. Attendees use the StreamBase Studio development environment to build StreamBase applications. Modular application development is explained and operators are used to filter data, perform aggregations and enrich output. Data persistence and retrieval using query tables is examined, and command line utilities that aid development activities are used. Application testing using feed simulator and debugger is discussed, and unit testing programs are created and used to assist debugging.

LEARNING OBJECTIVES
- Explain the StreamBase Event Processing platform
- Design modular applications using StreamBase Studio
- Test and debug applications using debugger
- Build unit testing programs
- Use command line utilities to aid development
- Describe data persistence capabilities
- Discuss database connectivity
- Examine external application integration using adapters

COURSE TOPICS
- Introduction to TIBCO StreamBase
- StreamBase application development methodology
- Testing and debugging options
- Modular application development
- Command line utilities
- Data persistence and retrieval
- Accessing external databases
- External data access using Adapters

COURSE PREREQUISITES
- Some experience with the Java programming language is helpful.
